AOSOM™ has three types of projector screens: electric screen, manual screen, and tripod screen. Electric screens can descend and ascend back into the casing electronically. They come with remote control. Manual screens are operated by hand; they do not have remote control. Electric screens and manual screens can be mounted to ceiling and wall. Tripod Screen is the most affordable entry level portable presentation screen. These are ideal for travel, business show, portable classroom, church congregation and large group home theater presentations. AOSOM™ projector screens are made by two kinds of surface materials, which are Matte White and Glass Beaded. Matte White screen surface is the most versatile and uniform screen surface for front projection and has perfect diffusion for wide viewer distribution. This material is best used when ambient light is controllable and enables unlimited viewing angles with perfect uniformity while giving precise definition and color reproduction. Screen surface is washable with mild soap and water. Glass Beaded screen surface has the ability to achieve a higher gain and provide an unparalleled screen surface for vibrant, lifelike color reproduction at moderate viewing angles. It is not recommended for areas where the screen will be subject to abuse or soiling.
